Description: This new-bio spider is mostly pitch-black with a bright orange pattern on top of the abdomen. The sensory hairs that cover the body are tinted orange causing it to have an eerie orange glow.

Males are very small growing to no more than the size of a large tarantula. Females eat males after mating. Females can grow to be as large as 30- 40 lbs. With a three foot spread. They do spin webs but prefer to create trap-door tunnels out of which they pounce on their prey.

These spiders tolerate each other's presence but if annoyed enough will turn cannibalistic. The older they get the more solitary they are.
